Generate a coordinated ensemble of high-resolution, historical/future regional climate projections for land-regions of the globe sampling; multiple GCM/RCP/RCM/ESDs methods. 1st phase based on CMIP5 historical-projection runs and/or ERA-int boundary data

**Make data accessible & useable in common format/file structure**

Foster coordination between downscaling efforts & encourage local participation, **in generating, analysing & communicating potential regional climate change and associated uncertainties & risks**

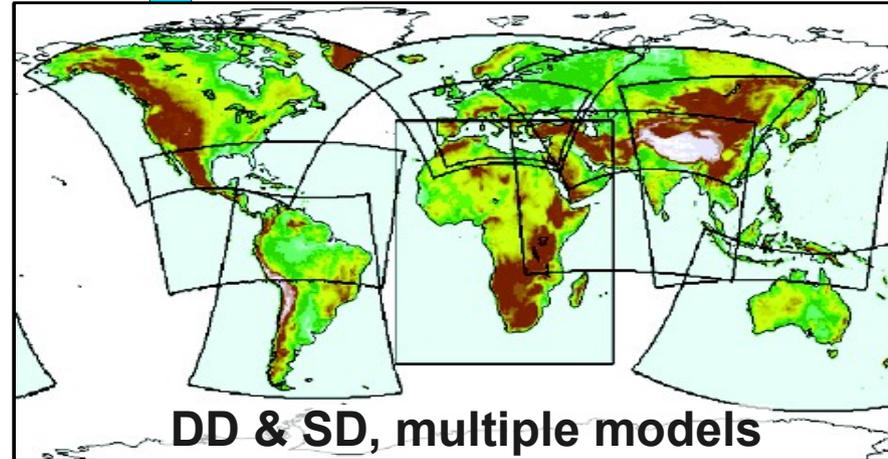

**Initial emphasis on African climate & IAV: START/WCRP sponsored 3 analysis/IAV workshops for an Africa-CORDEX team in 2011-12**

**Similar activities now starting for South Asia, East Asia and South/Central America**

### CORDEX: A COordinated Regional climate Downscaling EXperiment

#### Some changes

Written by Ole Bøssing Christensen

Thursday, 07 June 2012 11:03

A lot of things are going on. There will soon be data access through the same software (ESG) as used by CMIP5. During these discussions we have reread the specifications and come up with some necessary changes, and I will very shortly edit the specifications hosted here.

Very concretely: There ought to be an institution as part of the driving model specification in the file name. For consistency reasons we will now change the file name for reanalysis-driven runs from ...\_ERAINT\_... to ...\_ECMWF-ERAINT\_...

Do remember that a reanalysis-driven simulation is NOT "historical" but "evaluation", since "historical" is reserved for GCM simulations of the past with observed forcing!

I will also standardise the specifications of regular domains; sorry that I had not done that before!

**Update** 120607.1500: I have now put the regular domains into the specifications, as well as the ECMWF correction. In the near future we should also be defining a data policy. I will keep you up to date wrt. ESG.

**Update** 120608 Some minor corrections in the specifications (consistent file name and attribute example; proper revision date).

**Update** 120611: An error was found in the Excel list: the word "Air" was missing in the long\_name attribute for Near-Surface Air Temperature -like variables. I have added a link to the most recent sheet.

**Update** 120622: An inconsistency between driving\_experiment and driving\_model\_id in the SMHI example has been corrected. I now also stress, that only fields with a non-zero level needs the redundant level dimension.

<http://cordex.dmi.dk>

- Currently (Nov. 2012), holds only 2 evaluation simulations: DHMZ (EUR44) and UCLM (AFR)
- In the future, the archive will be distributed using the ESG2 technology (as CMIP5).

**Jens will present more info on this**

- There are different regional repositories to exploit/quality-check the RCD data before public release. E.g. MedCORDEX, EuroCORDEX, CORDEX-Africa, CORDEX South Asia.
- Expected release of evaluation runs: mid-2013?

- **CORDEX now has a Science Advisory Team (3 year mandate) that will report to the new WG on Regional Climate (Science & Information)**
  - Colin Jones (co-chair, Eur, Arctic)
  - Filippo Giorgi (co-chair, Med)
  - Bill Gutowski (N Am, Arctic)
  - Silvina Solman (S Am)
  - Won Tae Kwon (East Asia)
  - R. Krishnan (South Asia)
  - Bruce Hewitson (Africa)
  - Clare Goodess (IAV)
  - Michel Rixen (WCRP)
- **1<sup>st</sup> telco was held on Sept 13, 2012**

Areas not directly covered  
by SAT:  
Australasia,  
ARAB-MENA

**2<sup>nd</sup> CORDEX Conference**, Nov 4-7 2013, Brussels  
organized by the EC, WCRP and IPCC WG1

- ~end 2012 : Call for papers
- ~March 2013: Close of call for papers
- ~May/June 2013: Notification of acceptance
- ~summer 2013: Registration

## **Euro-CORDEX**

<http://euro-cordex.net/>

## **MedCORDEX**

[www.medcordex.eu](http://www.medcordex.eu)

Some specific actions of MED-CORDEX would be:

- **production** of an ensemble of **simulations with coupled Regional Climate System Models (RCSM)**, i.e with fully interactive Atmosphere-Land surface-River-Ocean components, covering the whole Mediterranean basin at high resolution;
- development of **stand-alone simulations** for all the components;
- **extending the ERA-Interim CORDEX runs to present** in order to use the most recent validation data available and the HyMeX field campaign results;
- development of **common strategies for ocean model initialization** for decadal-to-scenario simulations;

... One of the key features of MED-CORDEX is to create a **close collaboration with observational and satellite communities** (Hymex, Med-CLIVAR) in order to improve model components, and to increase the **link with the impact communities**.

**Santander Meteorology Group**

*A multidisciplinary approach for weather & climate*

# Regional CORDEX communities

**CC** The CORDEX South Asia program **brings together researchers/scientists** from the **Climate Science and those involved in vulnerability, impacts and adaptation (VIA)** research from the Asian region to interpret raw downscaled data for information on how climate processes over the continent may change, and to analyze how these changes may impact important sectors, such as health, agriculture and water security in multiple regions across the continent. The CORDEX South Asia activities are envisaged towards **building capacity and expertise within the region** to analyze, interpret and apply CORDEX results for decision making that are relevant to the knowledge needs of the South Asian region.

**Me** The keys to success of this initiative in South Asia will be in developing a means for **analysis and translation of CORDEX data in terms that are relevant to South Asia's** knowledge needs, and in developing the internal capacity to perform the analyses and in doing so create expertise at regional levels in South Asia. The first cadre of people trained on CORDEX can be called upon to help train the next generation of regional experts and advise on future expanded effort on CORDEX analysis and interpretation in South Asia, as well as on the **application of CORDEX results to inform** climate compatible development in South Asia.

**CORDEX-WRF**

## CORDEX opportunities for WRF

- WRF presents some singularities w.r.t. other RCMs
  - The model is run by many different groups, which are not coordinated by the developing institution (as is the case in other community models: RegCM, PRECIS, CCLM, ... )
  - Huge set of configuration options
  - It will, probably, be the only RCM run in **all** CORDEX regions, including polar regions.
- WRF is a “young” RCM
  - WRF is under very active development, including the addition of long term run capabilities: varying SST, deep soil temp. update, GHG variation, detailed radiation and soil schemes, output of averaged variables, ...
  - New missing features need to be identified and developed.

- Coordinates WRF users contributing to CORDEX
- Organized along several meetings:
  - March 2011: 1<sup>st</sup> CORDEX conference, Trieste
  - Nov 2011: 1<sup>st</sup> Euro-CORDEX meeting, Hamburg
  - Oct 2012: **1<sup>st</sup> CORDEX-WRF Workshop**, Tenerife
- Information available in the Wiki site  
<http://www.meteo.unican.es/wiki/cordexwrf>
- Distribution list:  
[cordexwrf+subscribe@googlegroups.com](mailto:cordexwrf+subscribe@googlegroups.com)
- Simulation list (+ observational data collection):  
<http://tinyurl.com/cordex-wrf-simulations>

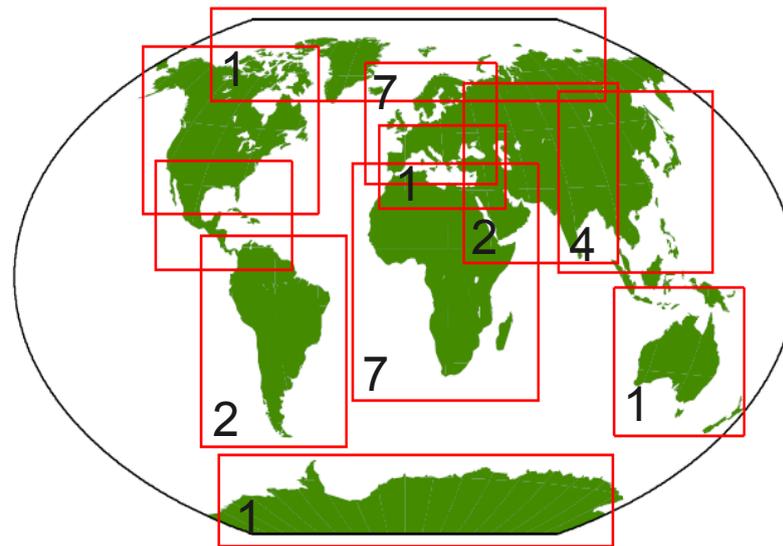

# CORDEX WRF Aims

1. **Produce** evaluation, historical and scenario simulations using WRF for all CORDEX regions
2. **Coordinate** the design of the evaluation simulations and their joint evaluation
3. **Collaborate** with the
  - a. Region-specific CORDEX Communities (RCC).
  - b. WRF community to improve the model for regional climate, by identifying key problems and through aims 4.a and 4.b, below.
4. **Develop**
  - a. WRF improvements for regional climate modelling
  - b. common tools to process model input & output
  - c. common metrics to compare RCD results across regions
5. **Collect** suitable observational data for evaluation
6. **Foster** the exchange of data, knowledge and tools among the groups

According to the CordexWrfWiki 23 groups are using WRF as a regional climate downscaling tool to perform CORDEX simulations.

The [CO](#)ordinated Regional climate Downscaling [EX](#)periment (CORDEX) is a framework aimed at improving coordination of international efforts in regional climate downscaling research. CORDEX was initiated as a result of the task Force on Regional Climate Downscaling, formed by the World Climate Research Program (WCRP). For details on CORDEX, visit the [CORDEX website](#).

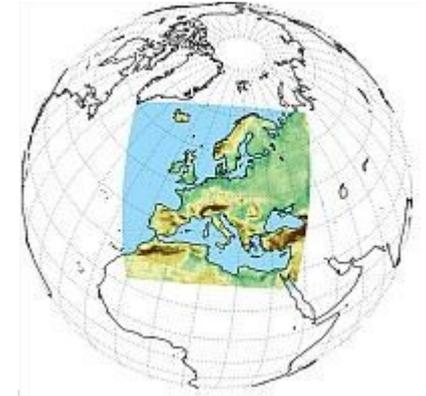

The CORDEX-WRF community has been established to coordinate the community of [WRF model](#) users within the CORDEX framework. The main mechanisms for coordination are:

- Regular [meetings](#)
- This CORDEX-WRF Wiki site
- The CORDEX-WRF distribution list ([cordexwrf+subscribe /AT/ googlegroups /DOT/ com](mailto:cordexwrf+subscribe@googlegroups.com))
- The simulation list ([tinyurl.com /SLASH/ cordex /DASH/ wrf /DASH/ simulations](http://tinyurl.com/cordex-wrf-simulations))

Specifically, the CORDEX-WRF aims are:

1. Produce evaluation, historical and scenario simulations using WRF for all CORDEX regions
2. Coordinate the design of the evaluation simulations and their joint evaluation

- ENSEMBLES-like domain
- Resolutions: **0.11°** and **0.44°**
- 19 institutions from 11 countries
- Current status:
  - Analysis of the evaluation simulations (obs: station + E-OBS)
  - Running scenario simulations
- 70+ scenario simulations planned
- Next meeting in Hamburg, Jan 2013.

# CLARIS-LPB contribution to CORDEX-South America

## **CLARIS-LPB**

The EU FP7 CLARIS LPB project (2008-2012)

### **Goals**

- To predict the regional climate change impacts on La Plata Basin (LPB).
- **To provide an ensemble of regional hydroclimate scenarios and their uncertainties for climate impact studies.**

## **CORDEX**

Initiative promoted by the WCRP

### **Goals:**

- To Provide a quality-controlled data set of RCD-based information for the recent historical past and 21st century projections, covering the majority of populated land regions on the globe
- to provide a more solid scientific basis for impact assessments and other uses of downscaled climate information

## **CORDEX-Africa**

<http://www.csag.uct.ac.za/cordex/cordex-africa-2>

- Africa is the first key region for CORDEX  
<http://euro-cordex.net/>
- The CORDEX-Africa community is, by far, the most organized community within CORDEX  
[www.medcordex.eu](http://www.medcordex.eu)
- START/WCRP promoted a series of workshops with African scientists and key global institutions.  
<http://cordex-australasia.wikidot.com>
- An example of the goals of CORDEX put into action  
<http://cccr.tropmet.res.in/cccr/home/CORDEX/aboutCordex.jsp>

# Santander Meteorology Group

A multidisciplinary approach for weather & climate

# Monsoon evolution

# Interannual variability

## 8-member WRF ensemble (UNICAN)

**10W-10E  
Zonally averaged  
precipitation  
(mm/day)**

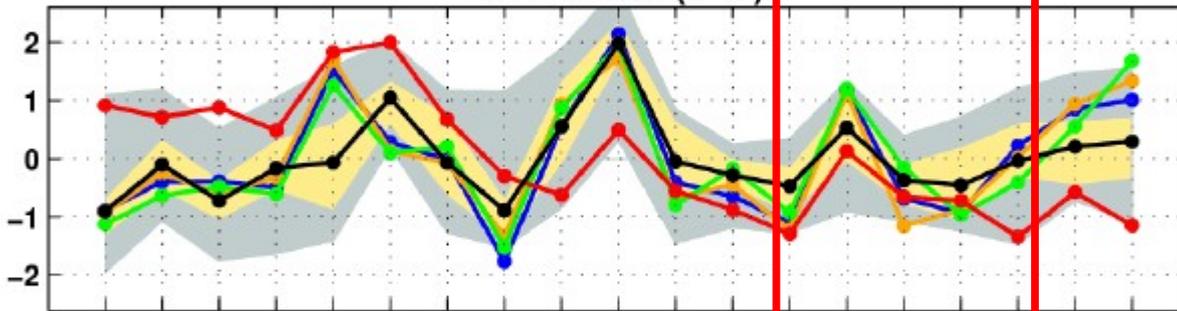

# Interannual variability

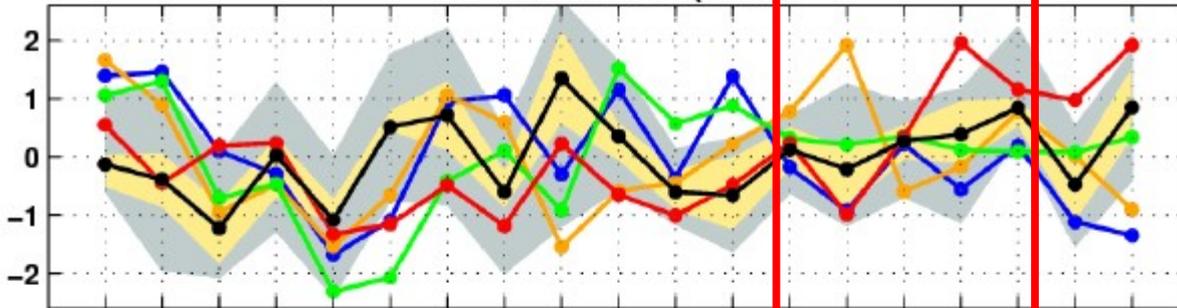

## Normalized Precipitation

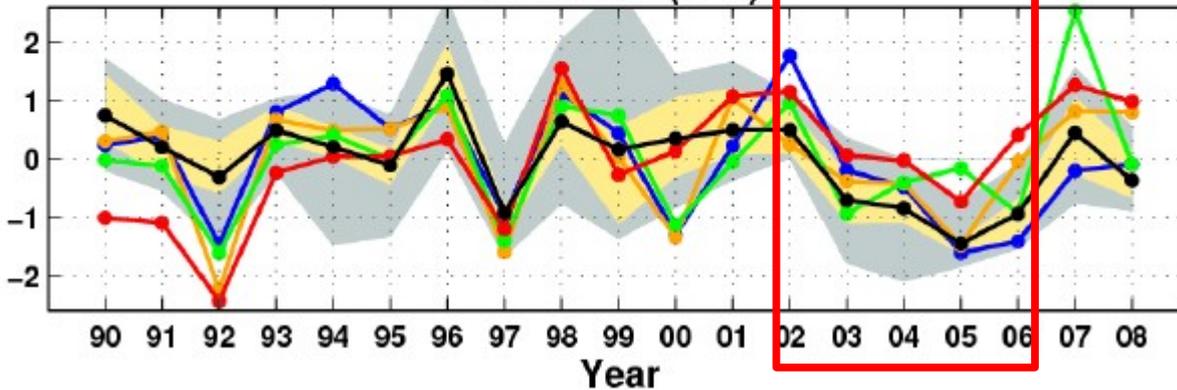

West Africa (JAS)

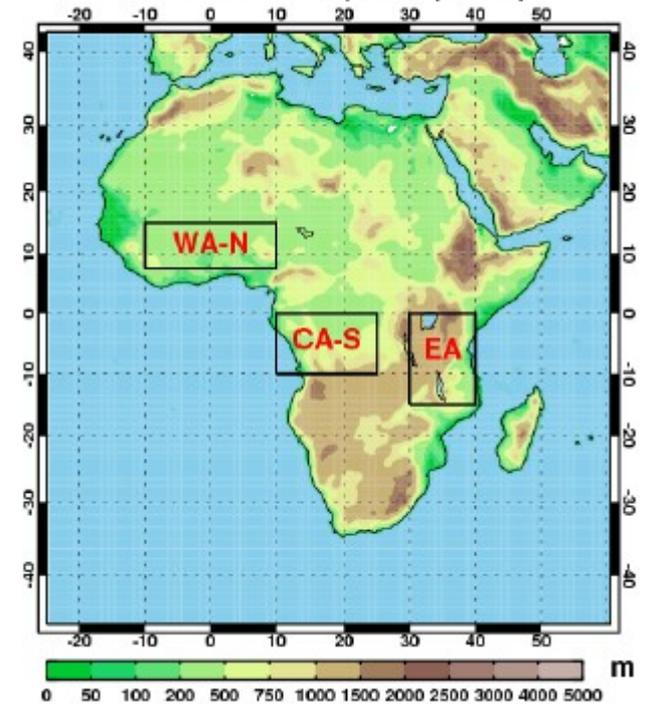

Central Africa (JFM)

East Africa (JFM)

CORDEX Africa | 0.44° (50 km)

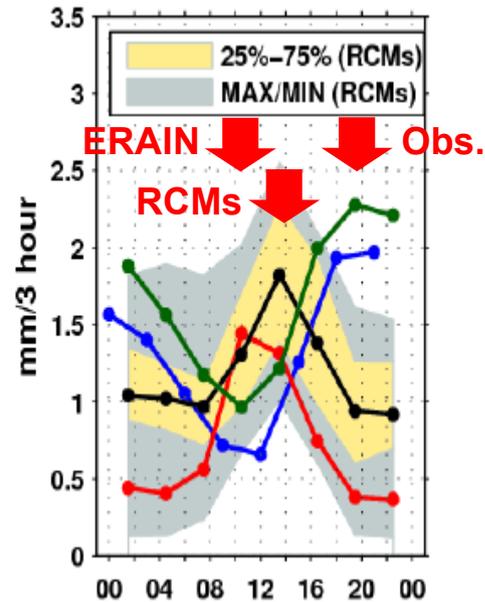

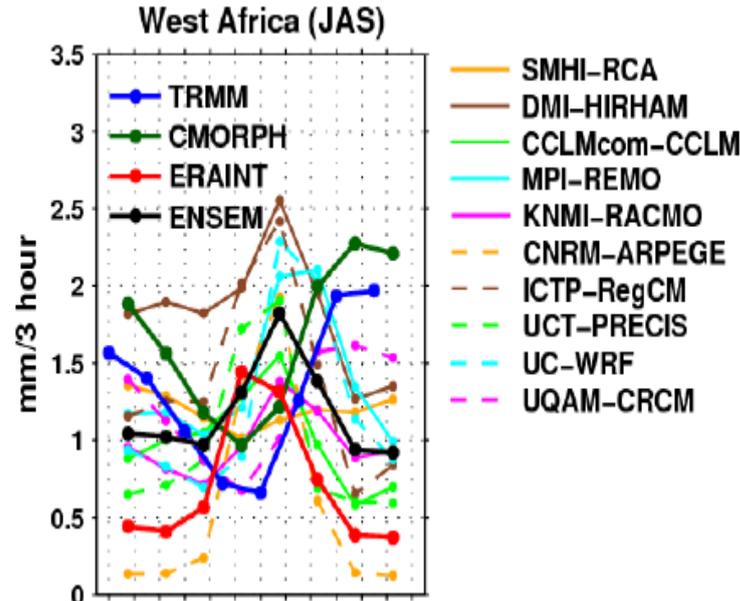

# Santander Meteorology Group

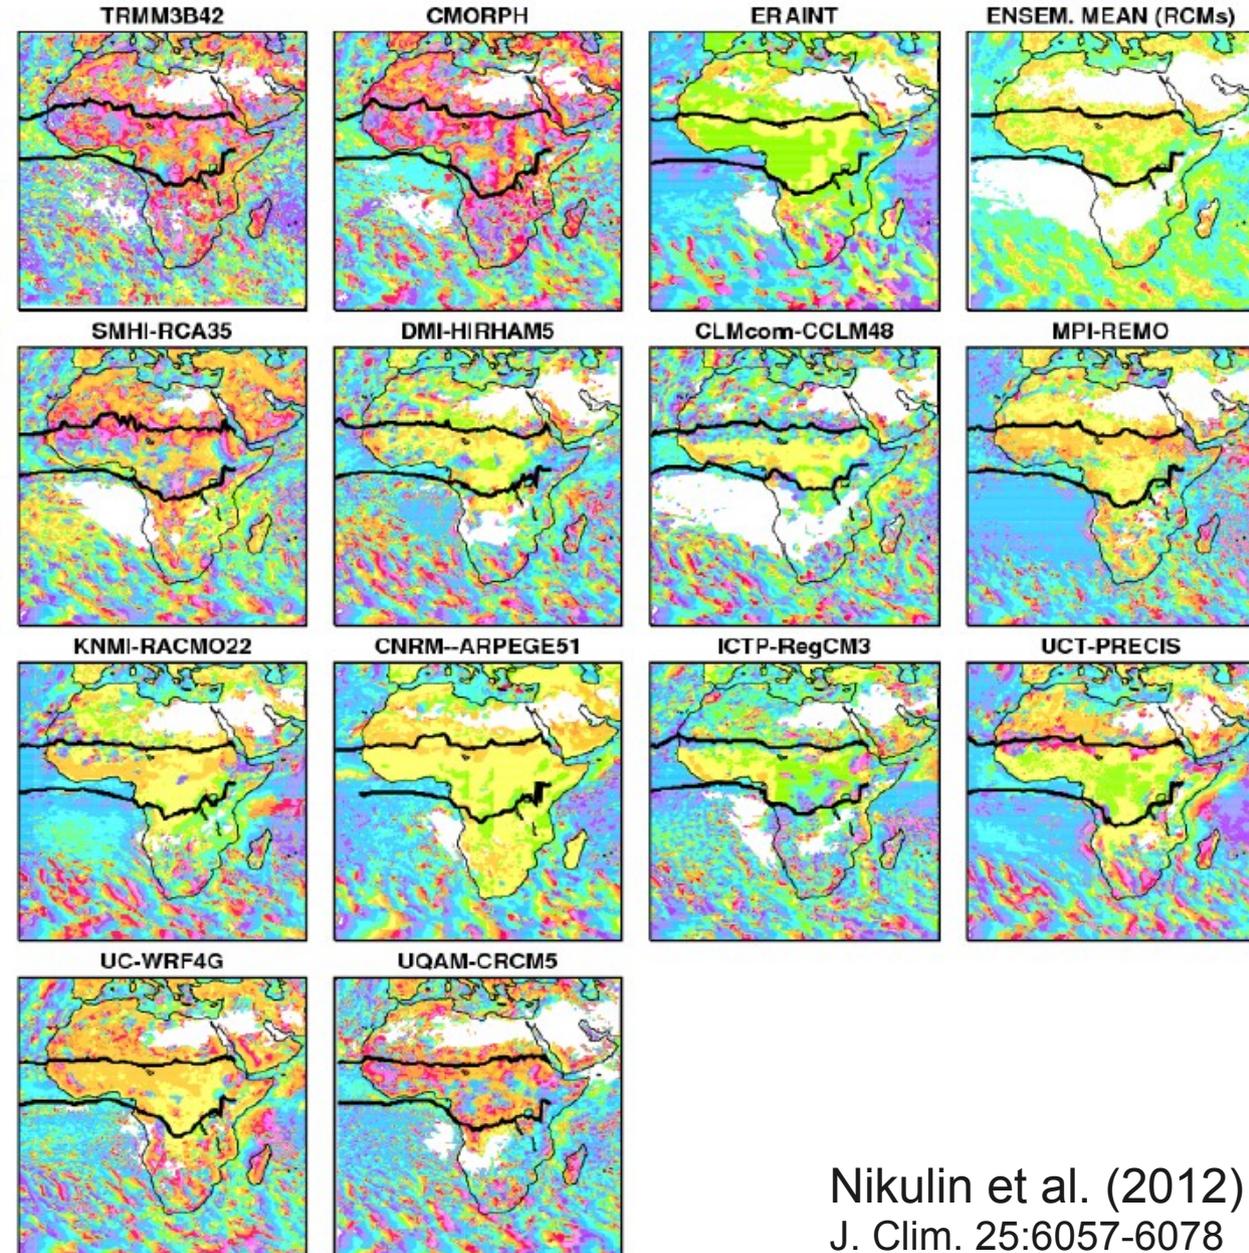

A multidisciplinary approach for weather & climate

# Daily cycle: rainfall

Diurnal cycle of precipitation: time of maximum | JAS | 2003-2008 | > 1 mm/day

Local time

- CORDEX coordinates RCD efforts internationally, promoting the engagement of regional climate & IAV communities
- Several RCC's organized, especially Africa
- Status:
  - Analyses of evaluation (ERA-Interim) simulations
  - Running historical+scenario (CMIP5) simulations
- First results indicate added value, but also common problems

# Thank you!
